

## Technical sheet MMT1616

**Description:** The MidMop is always on hand and easily stored, the compact design provides a go anywhere twin bucket mopping system. What is important about the MidMop design is that the mop press is conveniently mounted in the middle and above the clean and dirty water buckets with the very real advantage that you have full access to both buckets all of the time but, equally, the press is in the optimum position to be used without continuously bending down. An additional advantage of the mid-mounting is that both of the 16 litre pails can be removed and replaced without moving the mop press. The integrated water diverter ensures all dirty water is directed into the red dirty water bucket at all times ensuring a good and adequate mop rinsing facility before using the blue clean water bucket. When a mopping system is easy to use with everything in its place it plays a major part in improving the standard.

Internal water discharge diverter keeps your clean water clean. Dirty water is simply diverted to the 16L red dirty bucket. The new Nylo Twin 40 Flat mop is reversible so can be used on both sides giving two mops in one. The 5L Swing Pail can be added to carry those extra cleaning essentials creating a versatile cleaning system. The clever on-board mop storage keeps everything neat and tidy when in transit and when stored. Suitable for Kentucky or Flat mops the Midmop is ready to work. Access to both buckets is easy whichever mop you choose to use.
